ACKNOWLEDGEMENT

The success and the final outcome of this project required guidance and assistance from different sources and we feel extremely fortunate to have got this all along the completion of our project. Whatever we have done is largely due to such guidance and assistance and we would not forget to thank them.

We express our sincere thanks to the Head of the Department, Department of Computer Science, **and B.Amutha** for all the help and infrastructure provided to us to complete this project successfully and his valuable guidance.

We owe our profound gratitude to our project guide **Ms. G. K. Sandhia**, who took keen interest in our project work and guided us all along, till the completion of our project work by providing all the necessary information for developing a good system.

We are thankful to and fortunate enough to get constant encouragement, support and guidance from all the Teaching staff of the Department of Computer Science which helped us in successfully completing our minor project work. Also, we would like to extend our sincere regards to all the non-teaching staff of the department of Computer Science for their timely support.

ABSTRACT

The Fund Raiser is a web application which will help in collecting funds from different people for different events posted by the event managers and organizers. When someone creates a campaign, one can donate funds through the wire transfer via banks as per their convenience. In the present context of our country, there is no transparent online platform where one can create campaigns for raising funds for different activities. So, Fund Raiser can be an initiative to create different categorized campaigns, raise funds and list the donors who donated some amount in transparent chronological order.

1.1 AIM

From successfully organizing an event to providing financial aids to the victim of different natural calamities, finance plays an important role. Raising funds play an important role to support these kinds of activities. So, creation of events and the campaigns can help to support organizing some program at the national and international level, development of some infrastructures and provision of financial aid to victims of natural calamities and so on. Therefore, to promote and encourage more and more people for donations and financial support via websites accessed through the internet, Fund Raiser can act as a mediator for raising funds for different campaigns and support activities in an efficient manner.

1.2 PROBLEM IDENTIFICATION

In the present context of our country, there is no officially authorized websites or web applications operating at governmental level to collect funds and financial aids in a transparent manner. There are not enough Crowdfunding websites in India which are operated by a trusted governmental organization or trusted institutions. Several sites lack transparency and one cannot see who donated how much amount of money.

1.3 PROJECT OBJECTIVE

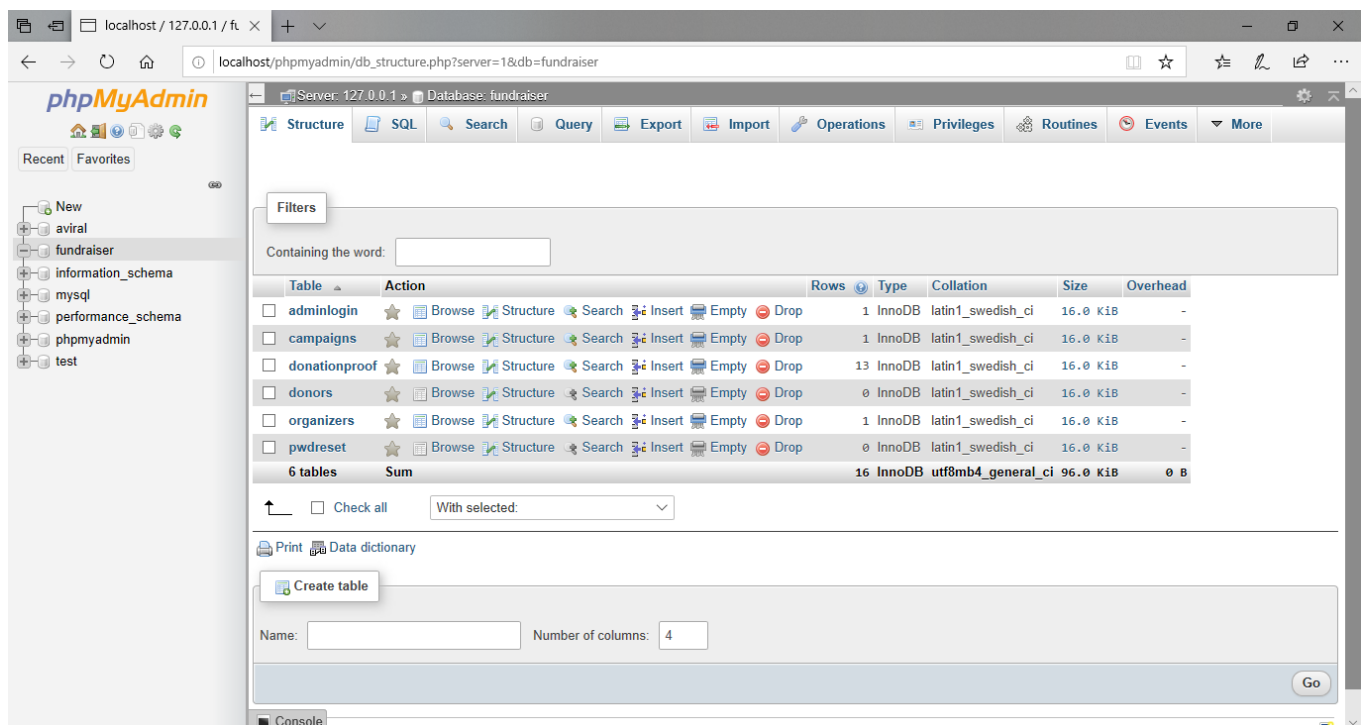

The major objectives of our project are:

- To facilitate people to create campaigns or events at an ease for raising funds.
- To create a web platform where people can make donations for different events or campaigns.

DATABASE

The database Fundraiser has following tables -:

- adminlogin
- campaigns
- donationproof
- donors
- organizers
- pwdreset

CONCLUSION

This project is designed to meet the requirements of a Fundraising System.

It has been developed as a website for the purpose using different frontend, backend and database technologies.

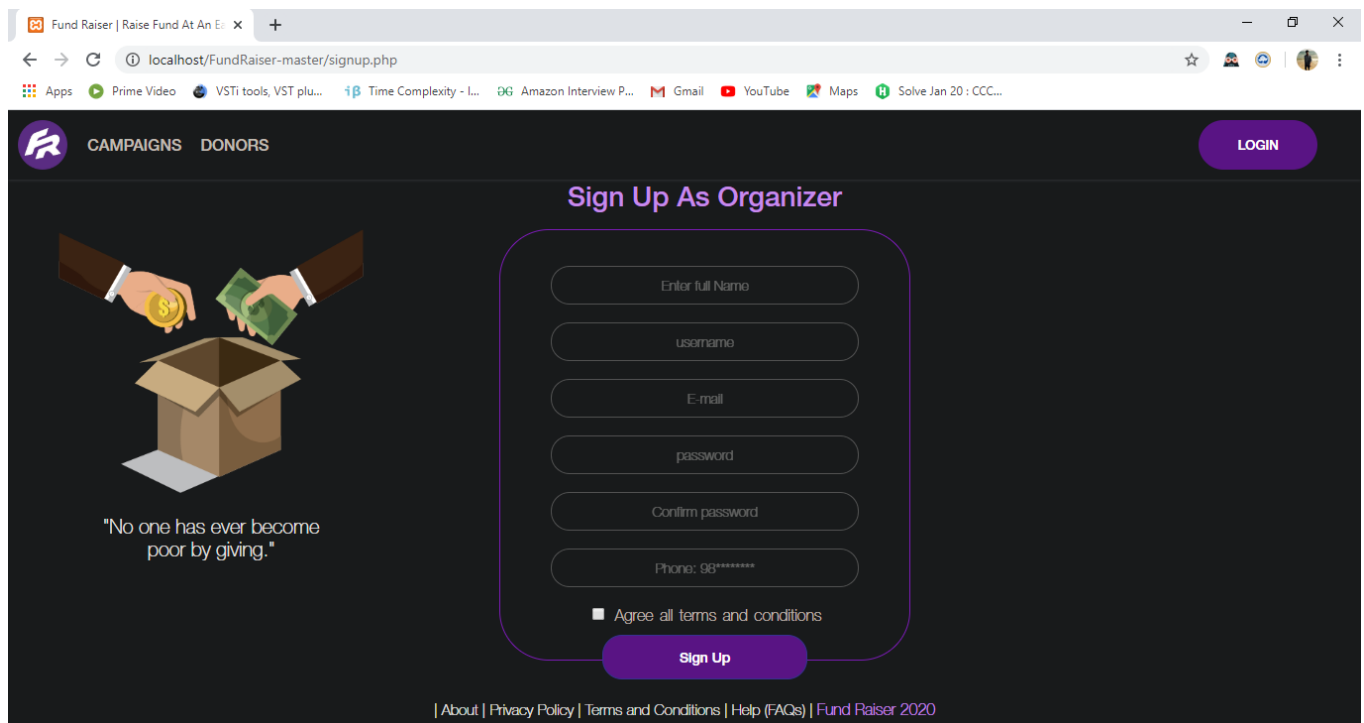

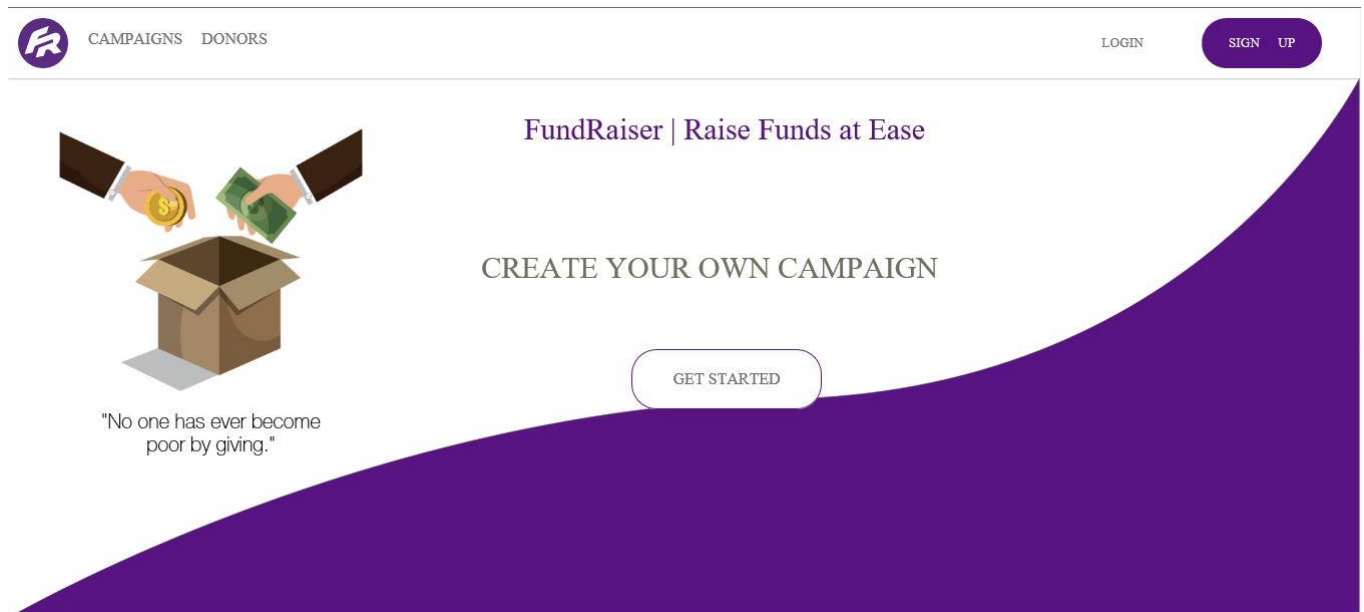

Overall, the project teaches us the essential skills like:

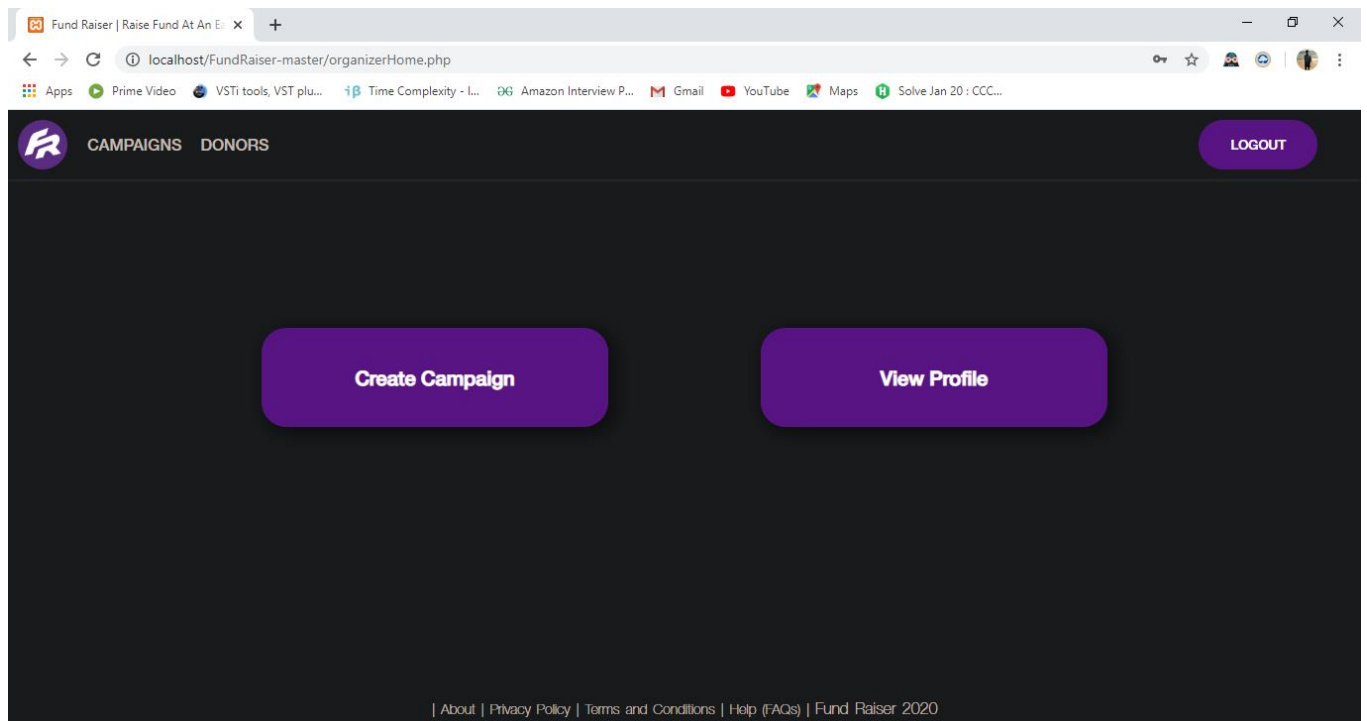

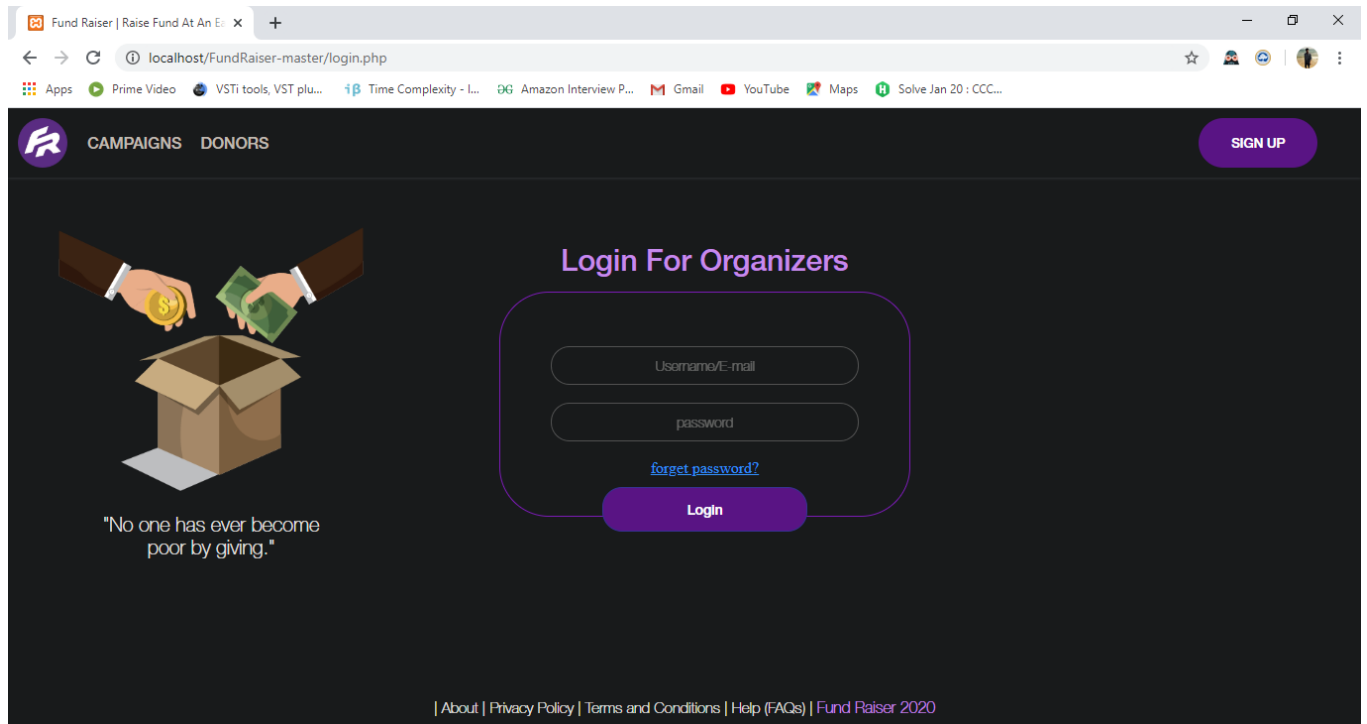

- Using frontend and backend technologies together with the use of MYSQL for database management and PHP for backend.
- Understanding the PHP concepts for a fully functional website.
- Tools used: Xampp
